

Dominic Ocarol progressreport

1. Retrospective

What went well? (Wins/Successes)

- Successfully designed the UI wireframes for login, registration, and dashboard.
- Implemented basic user authentication (login & registration).
- Created initial attendance tracking interface for teachers/admin.
- Good team coordination and task distribution.

What didn't go well? (Problems/Challenges)

- Encountered minor bugs in form validation and input handling.
- Some delays in integrating backend with frontend.
- Limited time for testing features thoroughly.

What should we start doing? (Improvements)

- Start regular testing after each feature implementation.
- Improve time management and task scheduling.
- Begin adding data analytics/report features (e.g., attendance summary).

What should we stop doing? (Waste/Inefficiencies)

- Avoid rushing features without testing.
- Stop working without clear task assignments.
- Reduce unnecessary design changes during development.
- What should we continue doing? (Best practices)
- Continue maintaining clean and simple UI design.
- Keep consistent team communication.
- Continue documenting progress and features.

2. Stand-Ups

What was achieved last week?

- Completed login and registration pages.
- Developed basic attendance marking system.
- Improved UI layout based on feedback.

What is the focus for today?

- Fix bugs in attendance input and validation.
- Connect frontend to backend/database.
- Start implementing attendance reports feature.

What blockers exist?

- Limited experience with backend/database integration.
- Occasional technical issues (e.g., device/internet).
- Time constraints due to other academic tasks.
