

Current Progress

Login Functionality (Bug Fix)

Issue Identified:

- The login button was not redirecting properly to the dashboard after clicking.

Solution Implemented:

- Fixed routing using `@Url.Action("Attendance", "DashBoard")`
- Ensured correct controller-action mapping:
 - Controller: `DashBoardController`
 - Action: `Attendance()`
- Verified that the correct view file exists:
 - `Views/DashBoard/Attendance.cshtml`

Result:

- Login button now successfully redirects users to the dashboard page.

Routing & Navigation Fixes

Issue Identified:

- Page not found (404 errors) due to incorrect view paths and routing configuration.

Dashboard Setup

Progress Made:

- Basic dashboard UI structure has been created.
- Navigation from login page to dashboard is now working.

Next Improvements:

- Add charts, summaries, and user-specific data.

Dummy Data Integration (For Presentation)

Purpose:

- To simulate real system behavior during presentation.

Implementation:

- Added sample data manually in the database / code:
 - Sample Users
 - Sample Products
 - Sample Sales Records

Example Dummy Data:

- User: admin@gmail.com
- Products: Laptop, Mouse, Keyboard
- Sales: Sample transactions with quantities and prices

Result:

- System is now presentation-ready with visible data.

Technologies Used

- ASP.NET MVC
- Entity Framework Core
- MySQL / MSSQL (depending on setup)
- LINQ
- HTML, CSS, JavaScript

Challenges Encountered

- Incorrect routing causing page errors
- Misconfigured controller-to-view connections
- Initial lack of data for testing and demo

Next Steps

- Implement full CRUD operations (Create, Read, Update, Delete)
- Improve UI/UX design of dashboard
- Add authentication and validation
- Connect real database with persistent data
- Add reporting features (sales reports, inventory tracking)

Conclusion

Significant progress has been made in fixing critical bugs, especially in login and navigation. The system is now functional and ready for demonstration with dummy data. Further improvements will focus on enhancing features and user experience
