

Dominic Ocarol progress report

1. Retrospective

What went well? (Wins/Successes)

- Refractor Ajax files connected to the database
- Added api js connection file from the frontend to the backend

What didn't go well? (Problems/Challenges)

- Encountered major bugs in form validation and input handling.
- Frontend and backend are not working together, more like no dynamics
- Encounter major bugs because the file path is not good

What should we start doing? (Improvements)

- Start regular testing after each feature implementation.
- Improve time management and task scheduling.
- Improve coding skills by not using AI

What should we stop doing? (Waste/Inefficiencies)

- Avoid rushing features without testing.
- Reduce unnecessary design changes during development.
- Building a dynamic backend and frontend

What should we continue doing? (Best practices)

- Continue maintaining a clean and simple UI design.
- Keep consistent team communication.
- Study the fundamentals of frontend stuff
- Keep the ui simple

2. Stand-Ups

What was achieved last week?

- Completed the Ajax code, but not yet the DB connection
- Minor bug fix

What is the focus for today?

- Fix bugs in attendance input and validation.
- Start implementing the attendance and reports, students, and other features.

What blockers exist?

- Limited experience with backend/database integration.
- Time constraints due to other academic tasks.
