

Dominic Ocarol progressreport

1. Retrospective

What went well? (Wins/Successes)

- Successfully designed the UI wireframes for login, registration, and dashboard.
- Implemented basic user authentication (login & registration).
- Created initial attendance tracking interface for teachers/admin.
- Added ajax and modify the js files but not yet connected to the database

What didn't go well? (Problems/Challenges)

- Encountered minor bugs in form validation and input handling.
- Some delays in integrating backend with frontend.
- Limited time for testing features thoroughly.
- Encounter major bugs because of the file path is not good

What should we start doing? (Improvements)

- Start regular testing after each feature implementation.
- Improve time management and task scheduling.
- Improve coding skill by not using ai

What should we stop doing? (Waste/Inefficiencies)

- Avoid rushing features without testing.
- Reduce unnecessary design changes during development.

What should we continue doing? (Best practices)

- Continue maintaining clean and simple UI design.
- Keep consistent team communication.
- Continue documenting progress and features.

2. Stand-Ups

What was achieved last week?

- Completed ajax code but not yet db connection
- Developed basic attendance marking system.

What is the focus for today?

- Fix bugs in attendance input and validation.
- Connect frontend to backend/database.
- Start implementing attendance reports feature.

What blockers exist?

- Limited experience with backend/database integration.
- Time constraints due to other academic tasks.
